

### **On-screen interpretation of sonar reading (P1/2)**

Follow these instructions to steer your vessel in such a way that your sonar device will give you detailed directions towards a found object.

Warning: Readings are extremely sensitive. If you take too long to follow instructions, the system may reset. For this reason, we recommend three users: one at sonar, one at the vessel's controls, and one on the outer deck.

#### **If object is located in the North-West quadrant:**

Controller should direct ship Left, unless –

- Waves of any level surround more than two sectors of the outer deck. If this is so, follow South-West instructions.
- Object is in an even-numbered ring. If this is so, Controller should direct ship Right.

#### **If object is located in the North-East quadrant:**

Controller should direct ship Right, unless –

- Object is in the 1<sup>st</sup> or 2<sup>nd</sup> ring. If this is so, Controller should direct ship Right.
- Only one sector of the outer deck is surrounded by rippling water. If this is so, follow South-East instructions.
